This diagram illustrates the 16th step of a LEGO Technic build. The main assembly at the top features a grey motor connected to a gear system, including a large grey wheel. A white Technic beam is being positioned to be attached to the side of the motor housing. Below this, a separate sub-assembly is shown, consisting of a blue Technic beam, a white Technic beam, and a black wheel. Green lines indicate the specific connection points on the white beam that will be integrated into the main chassis.
